Verso

Wiring Accessories

Verso offers a comprehensive range of wiring solutions for any application with our Modular White Moulded, Mini Grid, Euro Module data Grid and Part M ranges

Meticulously designed to be versatile and combine modern design and stylish aesthetics whilst enhancing the level of quality, functionality, flexibility and safety.

The entire range has been certified to the industry's highest certifying body Intertek standards and is supported by our lifetime guarantee. We have also included enhanced installation features throughout the range such as a state of the art three pin shutter mechanism on our sockets to enhance the safety aspect

of the products. We are also introducing captive and backed off terminal screws and in line terminals to ease the installation process whilst on site.

To enhance the aesthetics for the home owner and increase the

specification of the products, Verso has been

constructed from the highest grade of urea with anti-microbial properties, all whilst maintaining a slim line 5mm plate depth.

With our new extensive range of 20AX printed options of Verso switches, you will be able to provide your client with a tailored installation to their precise desires.

New Mini Grid Range With printed 20AX switches

Now offering a bespoke printing service for your install. If you would like to know more about this service, please contact the sales office to find out more.

Verso has a comprehensive range of Part M products to support you with any installation where you may find this to be a requirement. This range has already been installed on local authority projects in South Wales.

New Verso Part M range No one gets left in the dark

We have proudly extended our comprehensive Verso range with a Part M offering rivalled by few.

The range goes further than simply sockets and switches to be able to ensure the end user is catered for, no matter the requirement.

Made from the same high grade urea with antimicrobial properties as standard.

Verso Modular switching system (MSS)

For many years domestic lighting and other switched circuits have become increasingly restricted by which switches are available on standard plates.

Verso's Modular switching system always allows you to install the correct switch module for the role your client requires it to function for, without comprising on the aesthetics of appearing in a standard switch plate.

The Verso **MSS** goes much further than simply allowing for an intermediate switch module to be included alongside a one or two way 10AX switch. The range includes modules such as:

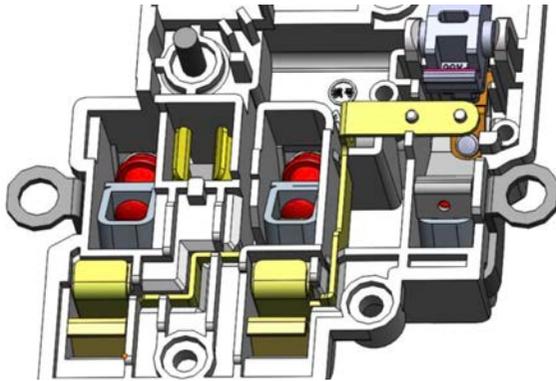

- ✓ Fuse modules
- ✓ Emergency key switch modules
- ✓ 20AX modules (printing available)
- ✓ And more. For a full list please see page 9

Quality terminals on each Product line

We understand the need for ensuring that your cable has a cerium termination. Easier and better termination means fewer faults and greater life expectancy of the product. We have ensured that every terminal within the Verso range never leaves you wanting.

Verso protection Shutter technology

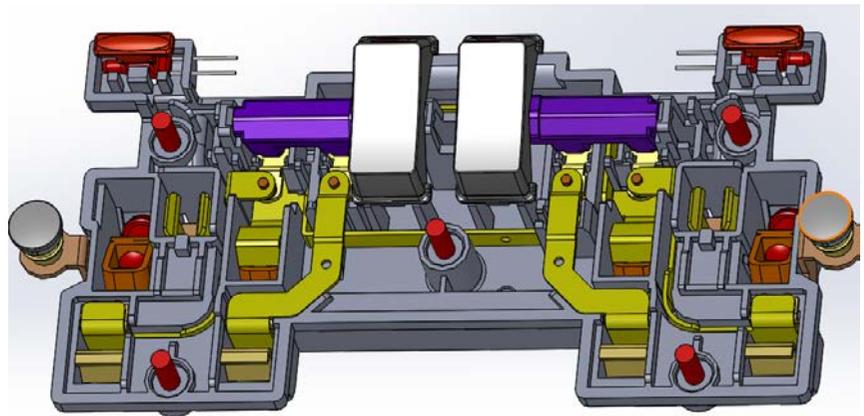

One of the fundamental requirements of the BS 7671 Wiring regulations is that a product must provide basic protection against electric shock.

Socket outlets have clear apertures for the plugs pins and therefore requires a shutter system to prevent any access to any live parts of the product without prior presence of the

earth pin and being present simultaneously.

This, however, doesn't stop small hands with thin sharp metal objects when they attempt to access behind the shutter from an acute angle. Verso's shutter technology ensures that even with a 1mm pin, the side entry past the shutters will not open. Even with significant force. This drastically enhances safety by making it difficult to defeat the mechanism and ultimately reduces the risk of electric shock.

Verso Wiring Accessories

The aesthetics of Verso have been meticulously designed throughout a span of eighteen months of market research and feedback. We believe it to be a perfect combination of the modern curved edge type with a traditional feel. In addition to the aesthetics for the home owner and the specifier, Verso has been

developed and designed to enhance the installers experience when using the range.

Verso terminals are designed in the same direction with lead-ins for wiring along with backed out screws which remain held to prevent them being lost. Wire end stops are also built into to the terminals along with clear identification marks to help make the installation much easier and of course, save time.

Terminals

The terminals all face in the same direction, this removes the need for the installer to rotate the product during installation and reduces loose connections

Wire End Stops

With our positive wire end stop Verso provides added safety with connections

Lead-ins

Additional lead-ins will aid guide the driver blade to the screws head with ease.

Terminal Screws

Verso terminal screw are already in a blackout position to speed the process of install

Wiring

Accessories

The expansive range of Verso Wiring Accessories has been meticulously designed to ensure that they are installer friendly, robust, aesthetic and safe.

Our range ensures that cables and lamps can be installed securely with our Ceiling accessories, junction boxes and be versatile and bespoke with our range of Mini Grid.

20AX Mini Grid

Switches & plates

Our yolk-less 20 AX mini grid system, has been designed to provide the ultimate versatility to any install.

Available with a vast amount of pre printed options, even custom prints are available made to order.

Verso 20 AX Mini Grid Yolk-less switch technology

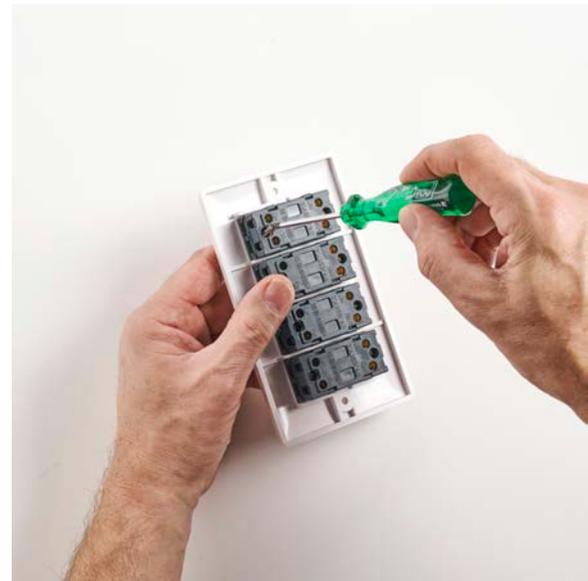

Introducing the new range of VERSO screw in, yolk-less MINI GRID switching technology. The range of 20AX module switches has been designed to tighten the versatility of the VERSO range in perfect harmony with our MSS plate switch module technology.

Now the installer can truly heighten the overall complexity of the install for the client, no matter what they require. The range of MINI GRID products is also accompanied by the same anti-microbial properties as the rest of our range and supported by the same Intertek certifications.

Pre-printed modules are also available in a vast number of options that encompass far greater variety than normally required. However, should your project need something bespoke and specific, this can also be arranged for you.

The simple screw in technology and yolk-less installation

means that the installation becomes simpler and saves a vast amount of your time when installing the products without compromising on functionality or finish.

VERSO MINI GRID switch plates are available from one single switch plate and extend up to an eight way plate to ensure that even the largest of jobs can be completed simply and seamlessly.

IP66 Weatherproof

Wiring Accessories

Verso IP66 weatherproof wiring accessories have been designed as the ultimate, universal solution to any interior or exterior installation that may be subject to high levels of water or dust ingress.

Using our modular MINI GRID system our range can be as versatile and bespoke as you need it to be.

VERSO
modular wiring accessories

VERSO
modular wiring accessories

Verso IP66 Weatherproof sockets

Durable, IP66 and versatile

Verso IP66 Weatherproof wiring accessories are manufactured from a tough and extremely durable thermoplastic and ideal for any interior or exterior application, particularly where wiring accessories could be vulnerable to the damaging effects of water or dust ingress.

Our range of IP66 wiring accessories has been designed with secure and easy to remove knockouts for the installers cable entries. We have also included sealing grommets for your screw entry point within the unit to completely ensure the lifelong structural integrity of the range.

Our IP66 collection totally assures your product's protection from water and dust ingress as well as powerful water jets.

We have also designed our Verso weatherproof range so that it can be as versatile as you require. With our enclosures, we can incorporate any of our normal urea products including our MINI GRID range, enabling labeled 20AX switches should your install require.
